Precision Hydraulic Components

Hydraulic bushing bearing blocks used in high pressure gear pump and motor applications.

Materials:

We are able to provide a wide range of specialized aluminum alloy and PTFE type bushings that have been tested and proven in high pressure gear pump applications. Bushing bearing block are manufactured to your exacting engineered specifications and because all manufacturing processes are performed in house we are able to control the exact quality and cost to the final products.

Manufacturing processes:

Our technical capabilities allow us to provide our customers with a total turnkey solution that can be scaled to match your exact requirements. Having developed materials and tested manufacturing methods that are proven we are able to produce a high quality finished bushing bearing block that will withstand the demands of high performance gear pump applications. Each of our processes are done in-house including the manufacturing of the PTFE bushing and overseen by experienced staff who knows what it takes to make a high quality part. Processes include:

- Precision CNC machining
- Bushing manufacturing and installation
- Final surface treatment and specialized tray packaging
- In-house bushing performance testing

Engineering:

Our engineering team will support you thought out all phases of initial design and start-up all the way to final production and after sales service. Fullco experience along with expertise combined with your staff becomes an extension of your business, that will provide long term benefit as well as solutions for your company.

Global Distribution points:

Fullco has the ability to ship from international locations directly to you and can offer the following services.

- Vendor Managed Inventory (VMI)
- On location consignment
- Blanket order stock and release programs
