Your Strategic Global Sourcing Partner

Precision Hydraulic Components

Hydraulic pistons used in high pressure pump and motor applications.

**Materials:**

We are able to provide a wide range of specialized high strength bronze and steels along with heat treatment processes according to your engineering specifications. In addition to the industry standard materials we can as well provide bronze layered steel piston shoes. Because all manufacturing processes are performed in house we are able to control the exact quality and cost to the final products.

**Manufacturing processes:**

Our technical capabilities allow us to provide our customers with a total turnkey solution that can be scaled to match your exact requirements for either blank pistons and shoes, semi finished or complete piston shoe assemblies. Each of our processes are done in-house and overseen by experienced staff who knows what it takes to make a high quality part. Processes include:

- High speed auto turning of piston and shoes
- Carburization, heat treatment and induction etc
- Precision spherical lapping and polish
- Cylindrical grind and polish

**Engineering:**

Our engineering team will support you thought out all phases of initial design and start-up all the way to final production and after sales service. Fullco experience along with expertise combined with your staff becomes an extension of your business, that will provide long term benefit as well as solutions for your company.

**Global Distribution points:**

Fullco has the ability to ship from international locations directly to you and can offer the following services.

- Vendor Managed Inventory (VMI)
- On location consignment
- Blanket order stock and release programs
